Manual trigger point therapy combines mechanical, reflex, biochemical, energetic, functional, cognitive-emotional, and behaviorally effective phenomena. As such, it influences not only peripheral nociceptive pain, but also intervenes in the body's pain-processing and transmission mechanisms.

Here you will learn: a systematic, manual-therapeutic approach to recognize and deactivate the potential of trigger points to cause pain and dysfunction; how to treat the accompanying fascial disorders; and how to prevent recurrences.
